It is a recruitment application created for recruiters, powered by conversational AI, which automates the recruitment process using AI for faster hiring. The application comprises a Login Page, Dashboard Page, Outreach, Candidates, and Screening Page. Initially, recruiters have to log in through their company email. After successfully logging into the account, they will be redirected to the dashboard/chat page. It has three sections with filters where recruiters can filter out candidates based on vacancy and department. The third section contains the conversation between the bot and interviewer. Interviewers can also intervene and chat with the bot.

Secondly, we have the Outreach page where recruiters can invite the interviewer to chat with the bot for a given job ID. Thirdly, we have the Candidate page where recruiters can see the profiles of all the candidates with information like score matched with the profile, name, status (such as qualified, rejected, etc.). It also has filters where recruiters can sort out candidates by department and position, and they can search using the candidate's name. Lastly, we have the Screening Page where you can set the predefined questions to ask the candidate during screening
